Hemo bioscience Hires Kayla Erculiani as Product Manager

Durham, NC (November 29, 2021) – Hemo bioscience, a leader in the transfusion diagnostics market, today announced the hire of Kayla Erculiani as the full-time product manager. In her new position, Kayla will be responsible for new product development, customer technical support, and developing specifications for proficiency tests.

Kayla comes to Hemo bioscience with five years of experience at large academic hospitals including The Johns Hopkins Hospital and UNC Medical Center. She received a bachelor of science in Medical Laboratory Science from Salisbury University and completed the Specialist in Blood Banking Technology program at The Johns Hopkins Hospital. Kayla has experience with patient transfusion management, product manipulation, quality system operation and compliance, complex serologic testing, and two years of supervisory roles in the blood bank setting. She is passionate about transfusion medicine and is excited to join the Hemo Bioscience team and share her unique clinical and technical knowledge.

About Hemo bioscience

Founded in 2003, Hemo bioscience, Inc. develops and manufactures immunohematology reagents and related products for the world wide transfusion diagnostics market. Hemo bioscience's in-house research, development and manufacturing activities are led by blood bank trained scientists. From idea inception to product distribution we are committed to improving the science in blood banking. For more information, visit www.hemobioscience.com
